

Sinai Health System

# **Background & Context for Change**

Providing Person-Centered Care is a key quality aim of the hospital. 2-year results of the Canadian Patient Experience Survey revealed that only about 50% of patients in inpatient orthopedic rehab program felt encouraged to participate in goal setting (50.92%) and kept informed of their progress (55.82%). These results were slightly below provincial average (goal setting: 53.9%; kept informed 58.4%)

# **Aim Statement**

The aim of this quality improvement project is to improve patient experience in goal setting and being kept informed of progress, using the Experience Based Design approach for patients in an inpatient orthopedic rehab program.

# **Approach & Stakeholders**

## **Experienced Based Design Approach<sup>1</sup>**

Capture the experience Tools to help people tell their stories Understand the experience Tools for understanding patient and staff experience Improve the experience Tools to turn experience into action Measure the improvement Tools for evaluating and measuring the improvement

## **Key Stakeholders**

- •OT (Clinical Co-lead)
- •PT
- •SW
- •Nurse
- •MDs (Attending Physician and Physiatrist)
- •Patient Care Manager
- •Patient Advisors
- •Caregiver Advisor
- •Senior Director of Quality & Patient Experience
- Manager of Quality & Patient Safety
- •Director of Professional Practice & Education,

		IDEA FOR CHANGE

# Bridge to Recovery: Using an Experienced Based Design approach to improve patient goal setting

Nursing and Health Disciplines (Project Sponsor)

• Senior Director, Rehabilitation and Ambulatory Care

# **Capture & Understand**

## Patient Interviews

• Patient interviews were conducted prospectively with patients admitted to the high intensity stream of the inpatient orthopedic program at 3 points of their rehab stay: Admission (~1-5 days post admission), Mid-Point & Pre-Discharge (~1-5 days before discharge).

• 17 patients consented to be followed and a total of 36 interviews gathered and analyzed. • Team experience captured by conducting two focus groups with local teams. Total of 16 staff attended, including Nurses, OTs, PTs, SWs, RD, OTA/PTAs & Patient Care Manager.

### Demographics

## **Theme Analysis**

- Interview transcripts were reviewed independently by Project Lead and Clinical Co-lead
- Developed consensus on themes
- Team, physicians and patient advisors validated the themes

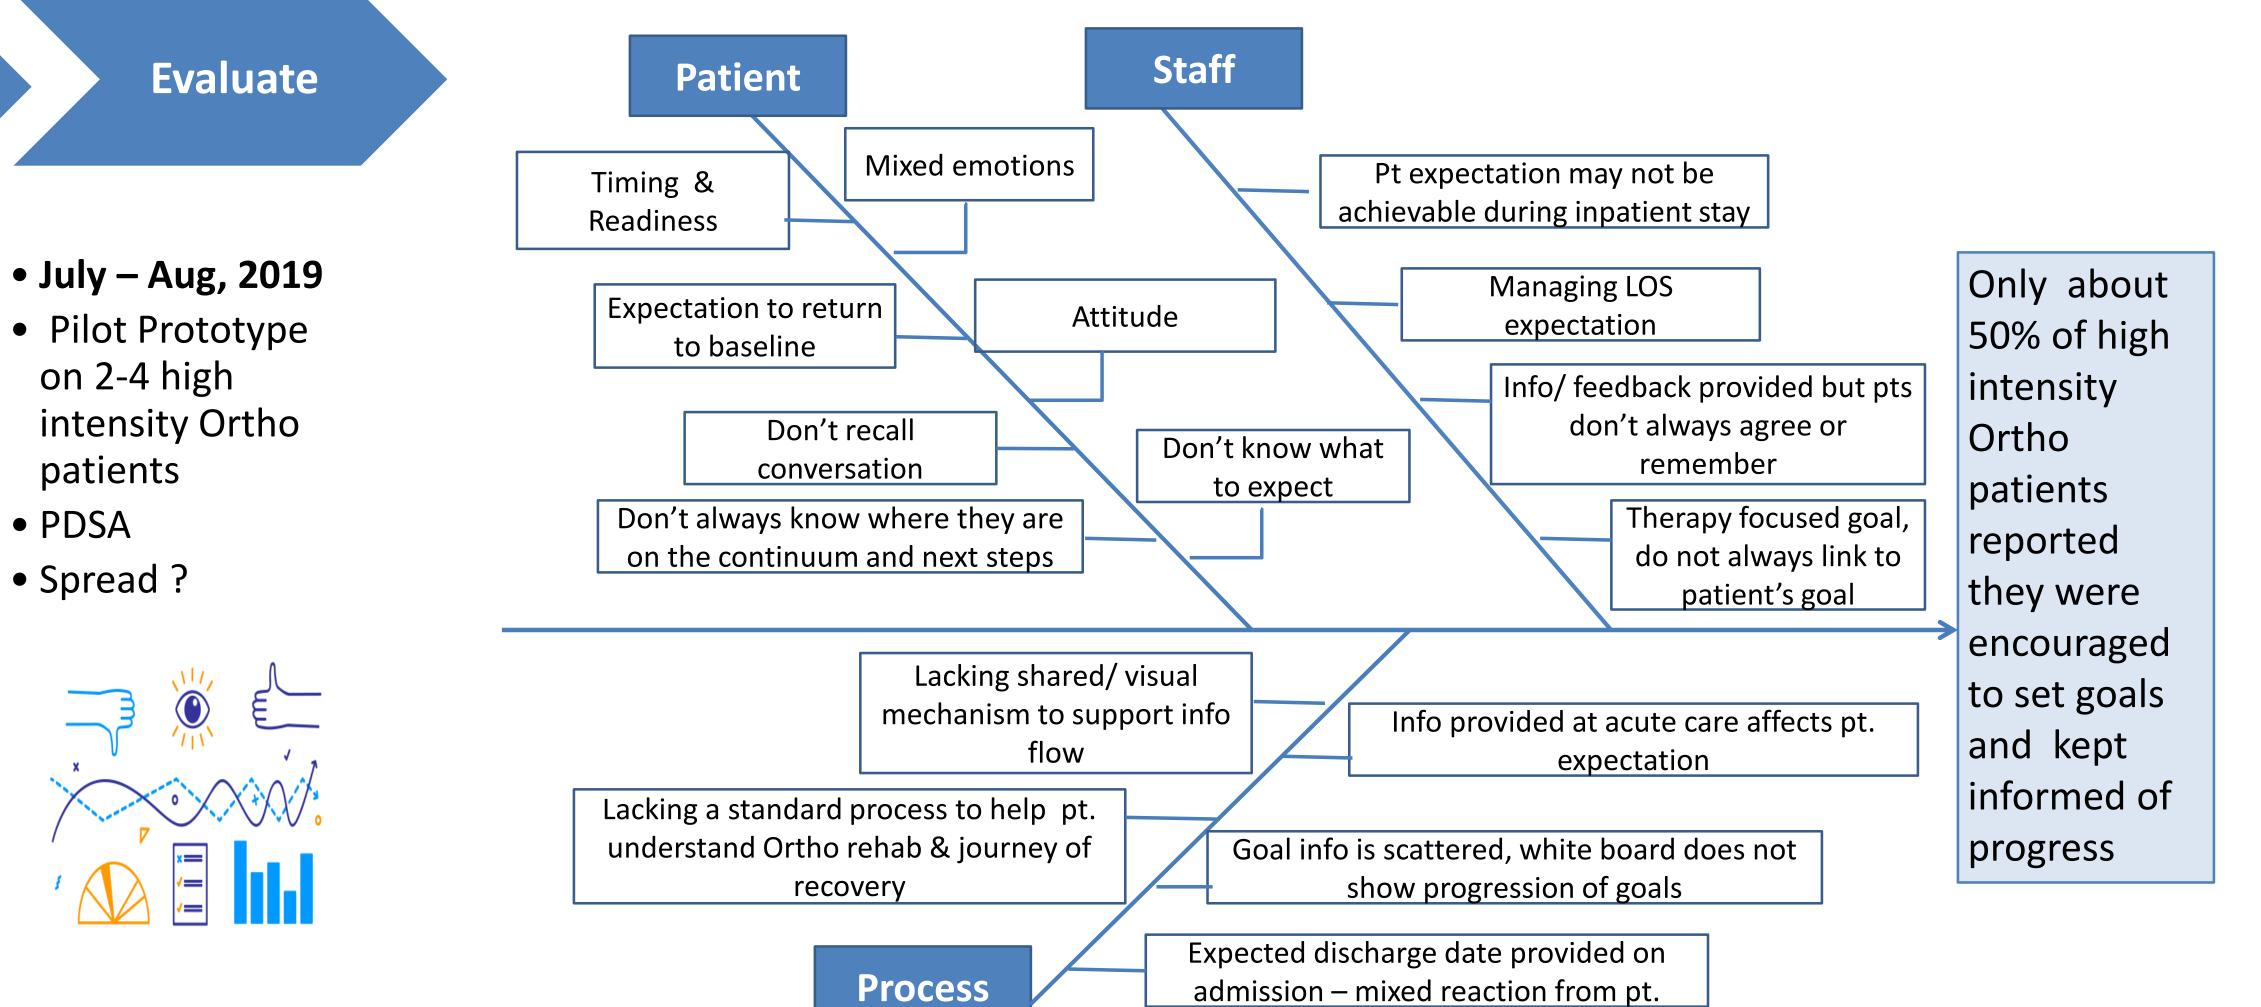

### **4 Ke**

#### **Expectation of Recovery**

"I was uneducated about what rehab was, I did not know [what the different therapists do], but now I know."

#### Timing and Readiness to set goals

"I felt ill-equipped to answer questions very we I did not think I was making too much sense ar I knew I wasn't going to be able to remember anything, which I don't. I wish they had come later on when I am a bit more cognitive and ab to understand and remember."

Janice Hon, OT Reg.(Ont.), MCI.Sc.; Saba Memon, OT Reg.(Ont.), MSc./BSc.

# **Co-Design Workshop**

18 key stakeholders came together to brainstorm and prioritize the change ideas.

Key Features	Change Idea
l age ual Based e mood and n admission	<ul> <li>Develop a self-management tool to include the following elements:</li> <li>What to expect in Inpatient Ortho Rehab</li> <li>Patient stated goal</li> <li>Tracking progress of key activities</li> </ul>

## **Prototype & PDSA**

The prototype was piloted with 4 patients admitted to Inpatient Ortho Program

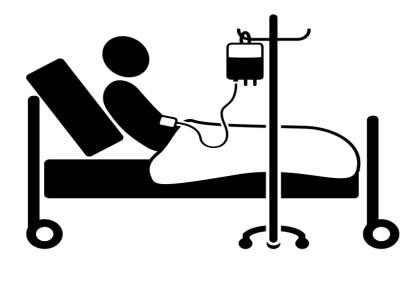

# Feedback & Lessons Learned

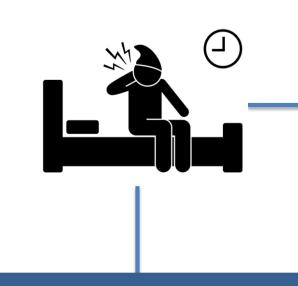

• 3/4 patients recommended the use of the tool for other patients; found the prototype was easy to understand and presented adequate level of details. One patient did not use the tool due to development of infection during the

• The explanation to patient on how to use the template is important as initial set up; patients would benefit from reminders throughout their stay. Therefore, it may be helpful to have a copy of the blank template in the gym area to support conversations and remind the patients to update progress.

• The intent of the tool was to allow self-tracking & reflection, however, it was noted that clinicians support and guidance were expected by some patients. As such, the self management concept in using the tool needs to be reinforced.

# **Before arrival to** Rehab

You may feel a lot of pain and need assistance with care. Your team will work with you to develop a care plan.

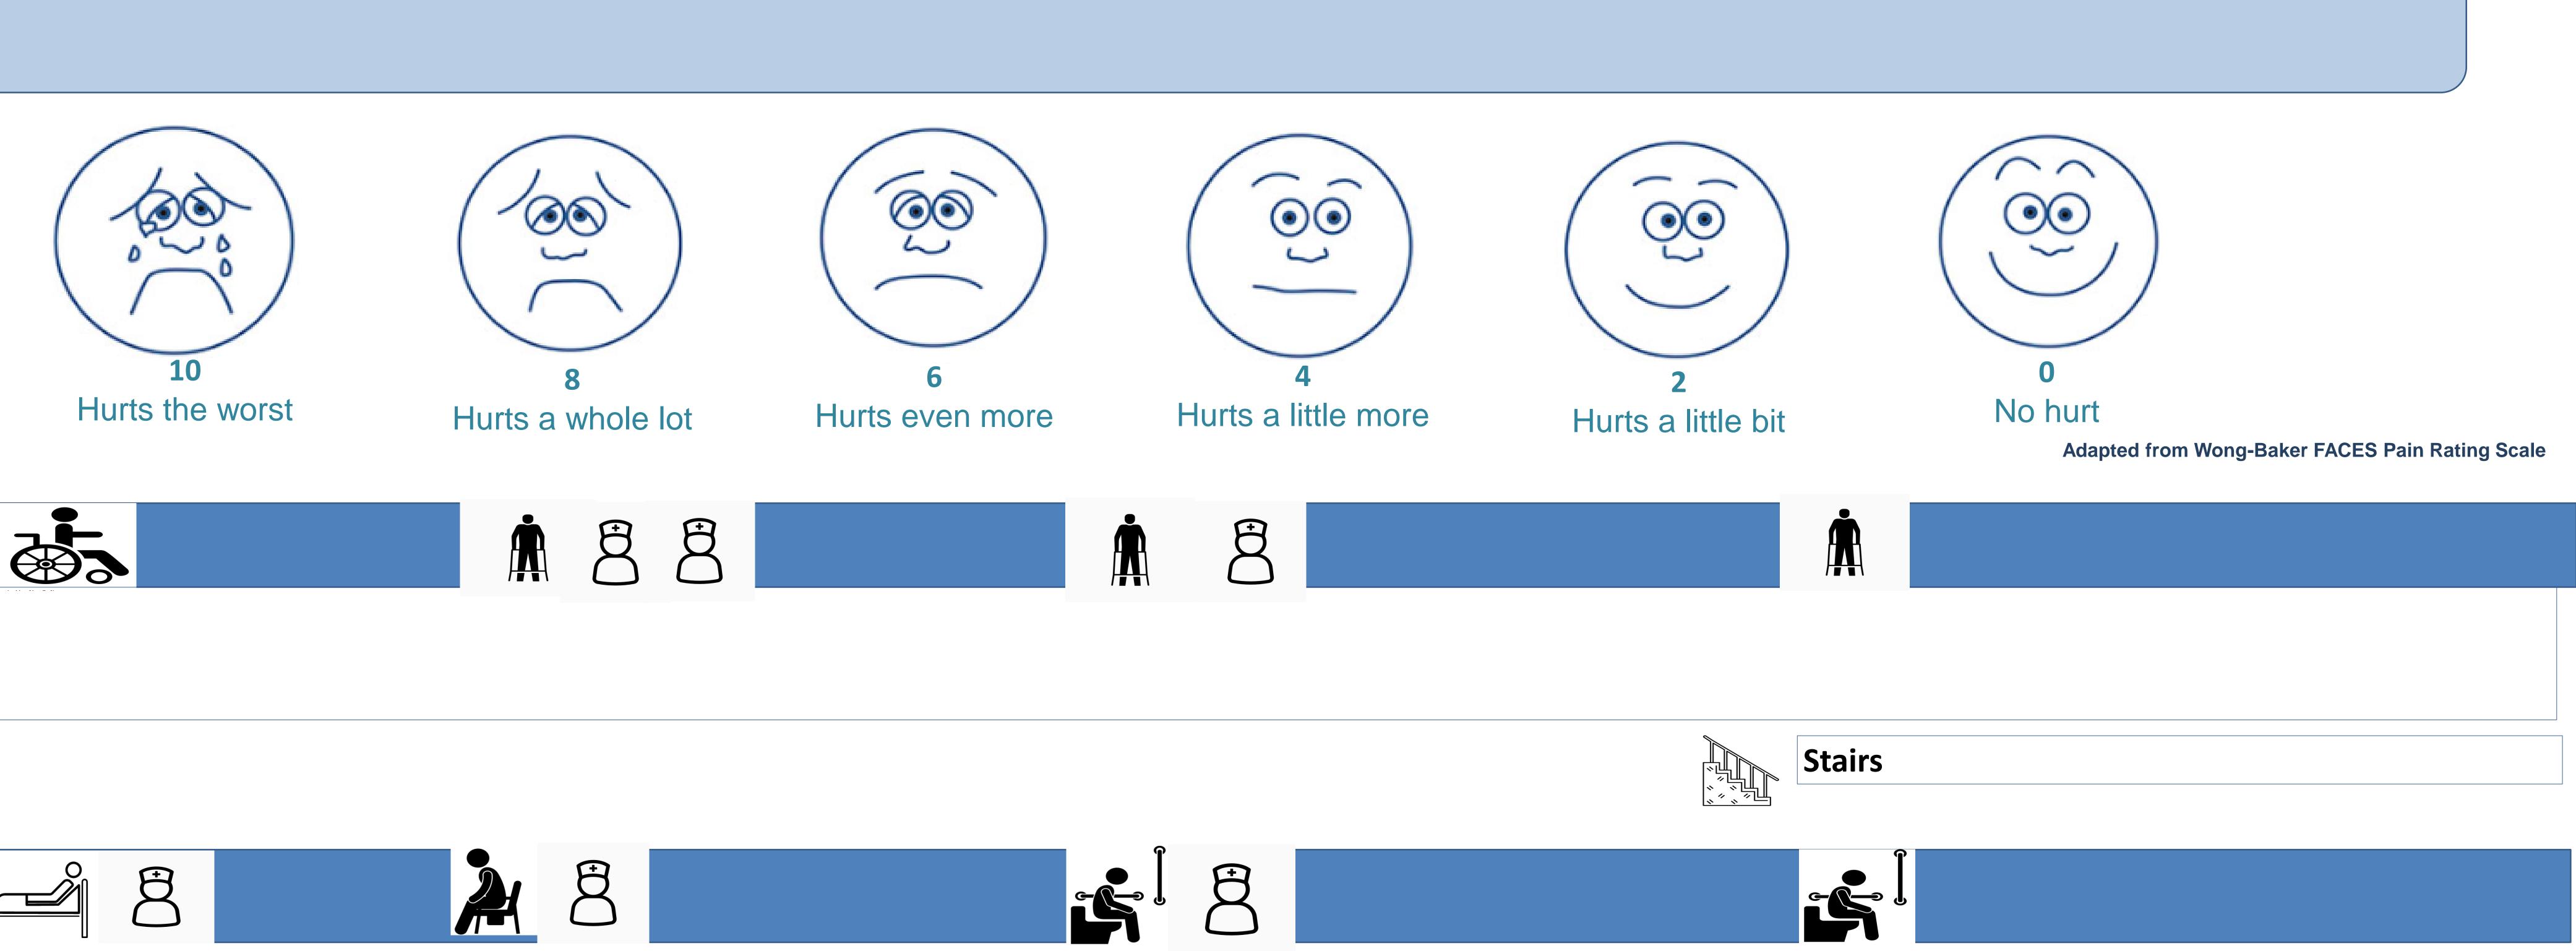

# Your Main Goal:

Pain

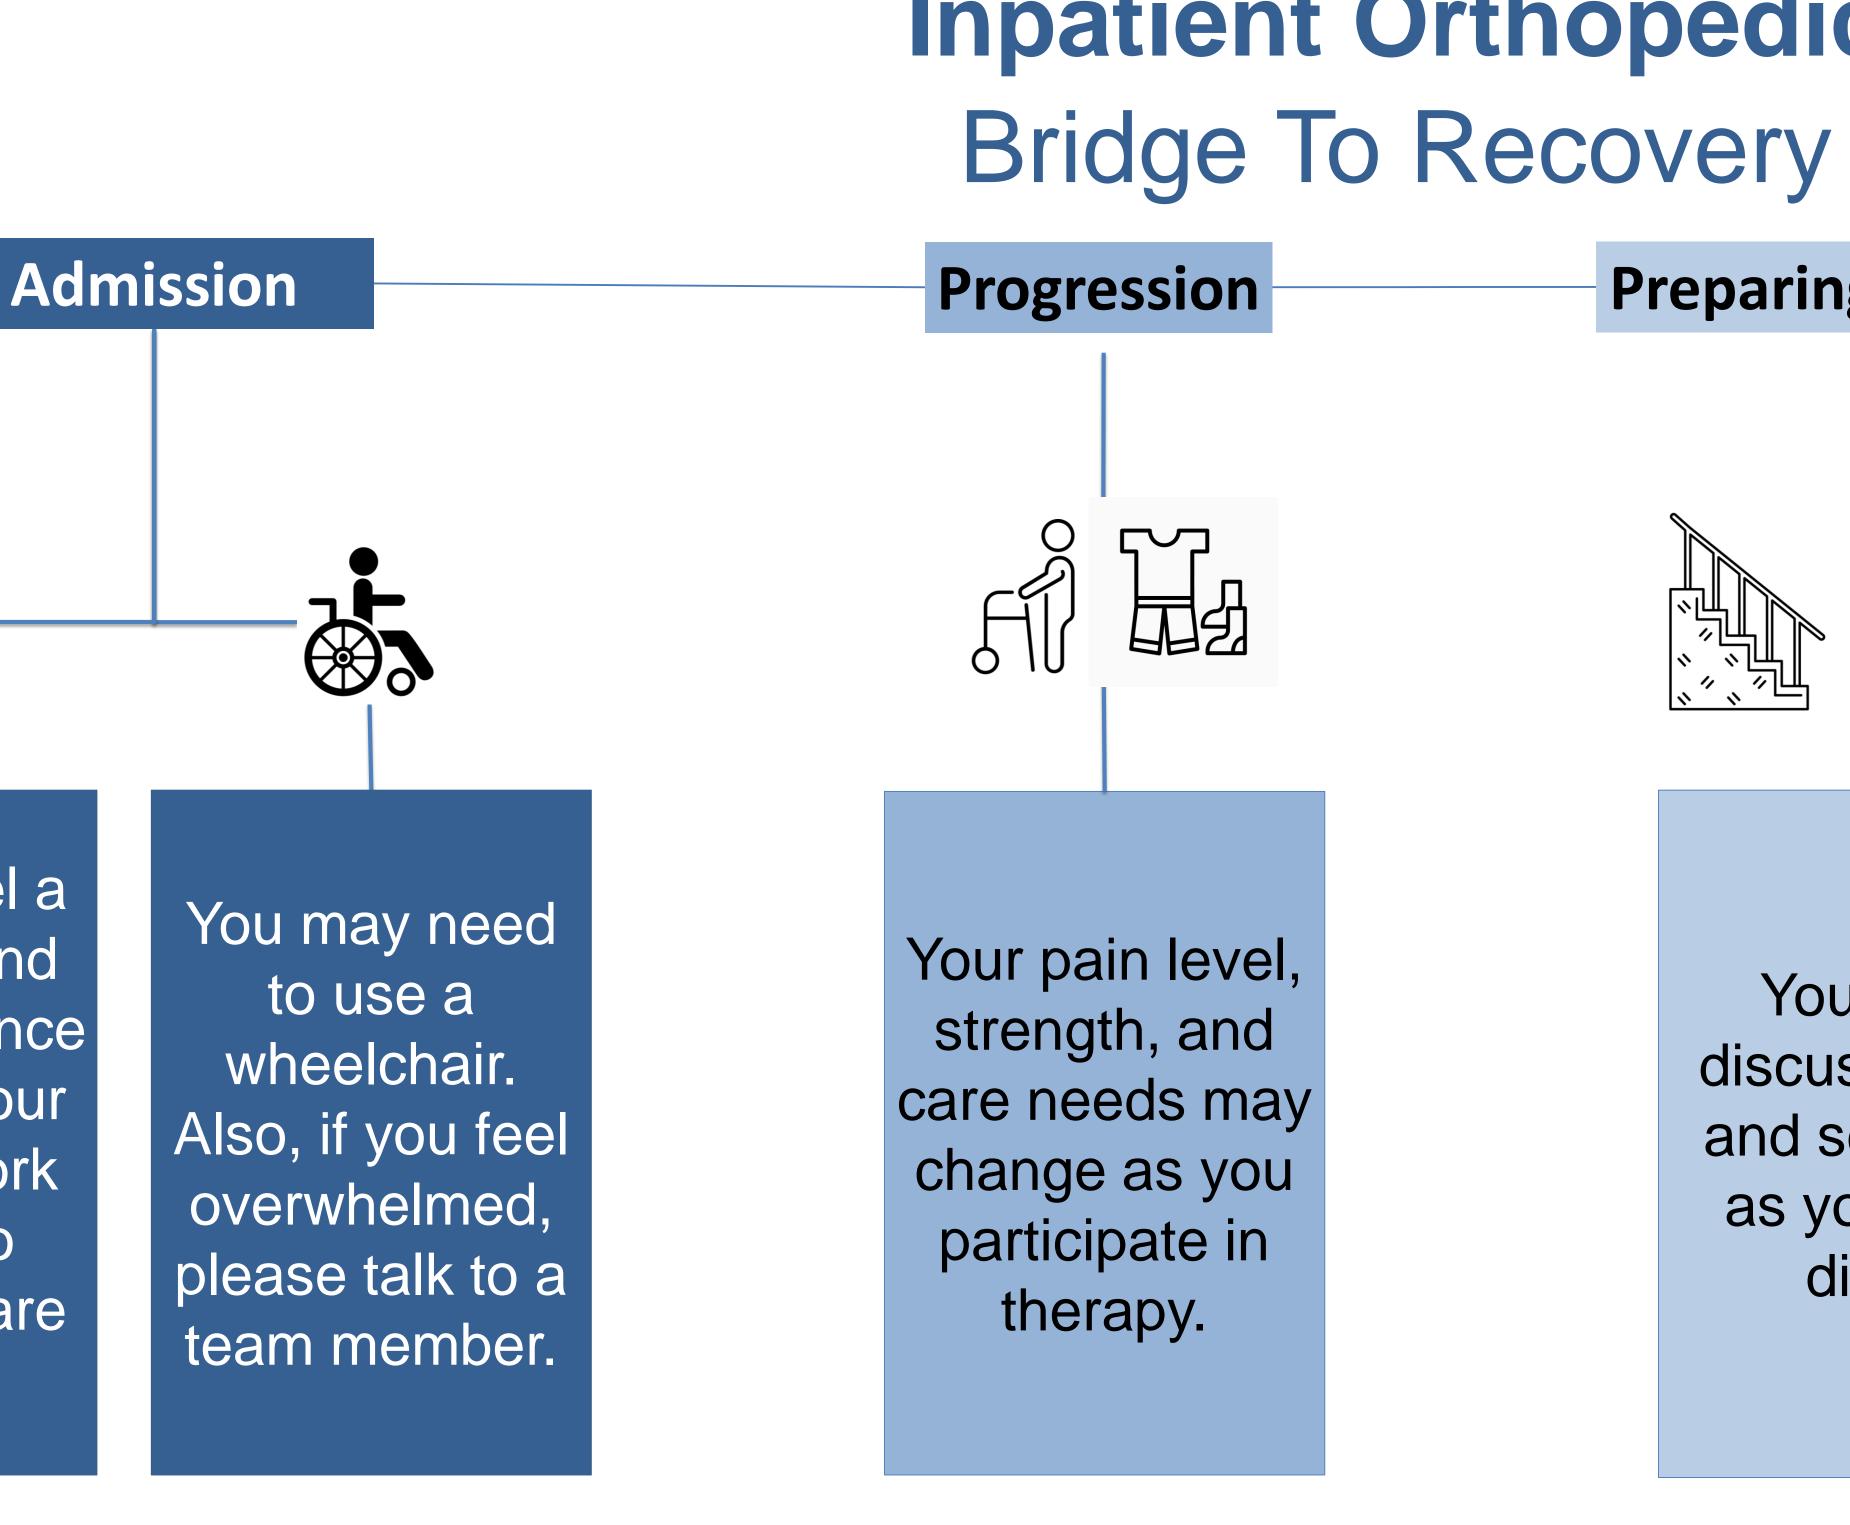

# Mobility

**Steps/ Distance** (Write down # of Steps or how far you can wheel or walk)

# Going to the toilet

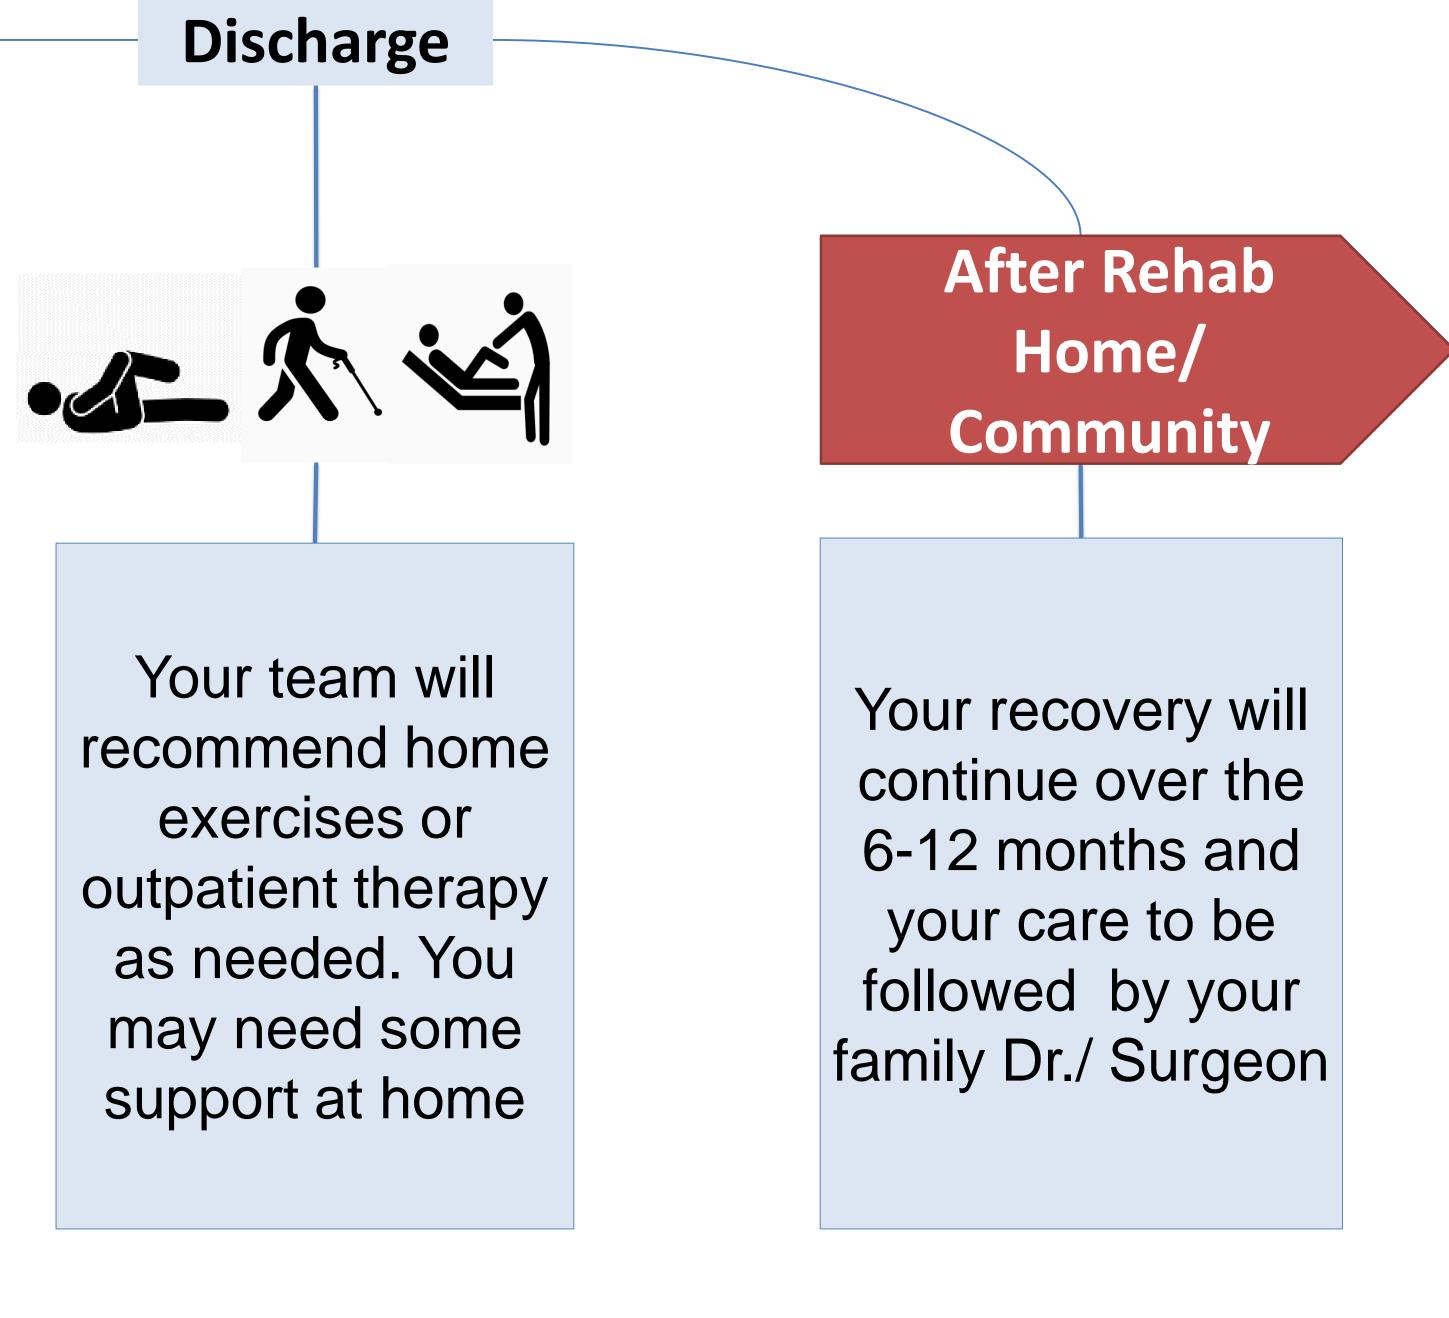

# **Inpatient Orthopedic**

# **Tracking your progress**

# **Estimated Discharge Date:**
